

AI Bias & Fairness Audit Report

Model: Healthcare (v1.0)
Date: 2026-05-06 06:07:12.605614
Test Cases: 900

Overall Fairness Score: 0.99 — FAIR

Dimension	Score	DI Ratio	Status
Gender	0.99	0.99	✓ Fair
Language	0.98	1.02	✓ Fair
Region	1.00	1.00	✓ Fair

Bias Analysis

Gender (Severity: LOW)

Minimal bias detected in the Gender dimension. The fairness score of 0.99 indicates the model treats demographic variants largely equally, with only 4.7% average difference. The Disparate Impact Ratio of 0.99 meets the 0.80 threshold.

Root Cause: Minimal gender bias detected. The model treats gender-variant inputs largely equally with minor statistical variation.

Language (Severity: LOW)

Minimal bias detected in the Language dimension. The fairness score of 0.98 indicates the model treats demographic variants largely equally, with only 2.1% average difference. The Disparate Impact Ratio of 1.02 meets the 0.80 threshold.

Root Cause: Negligible language-based performance gap. The model handles linguistic variation adequately.

Region (Severity: LOW)

Minimal bias detected in the Region dimension. The fairness score of 1.00 indicates the model treats demographic variants largely equally, with only 0.0% average difference. The Disparate Impact Ratio of 1.00 meets the 0.80 threshold.

Root Cause: Minor regional variation within acceptable bounds. Geographic features have minimal impact on predictions.

Mitigation Recommendations

#1 [data_level] Assign higher weights to underrepresented groups during training. (Effort: low, Impact: medium)

#2 [best_practice] Schedule periodic re-audits to detect future fairness drift. (Effort: low, Impact: high)
